## I/O Extension Module With Four Digital Outputs

This data sheet is only valid in association with the documents of the used fieldbus coupler

## Function

The terminal is designed for use within an VARIO station.. It is used to output digital signals.

## Features

- Connections for four digital actuators
- Connection of actuators in 2- and 3-wire technology
- Nominal current per output: 0.5 A.
- Total current of the terminal: 2 A .
- Short-circuit and overload protected outputs
- Diagnostic and status indicators

Figure 1

108
All modules will be delivered including connectors and labeling fields

Figure 2 VARIO DO 4/24 with appropriate connector

Local Diagnostic and Status Indicators

| Des. | Color | Meaning |
| :---: | :---: | :--- |
| $\mathbf{D}$ | Green | Bus diagnostics |
| $\mathbf{1 , 2 ,}$ | Yellow | Status indicators of the |
| $\mathbf{3 , 4}$ |  | outputs |

## Terminal Assignment

| Terminal <br> Point | Assignment |
| :--- | :--- |
| $\mathbf{1 . 1}$ | Signal output (OUT 1) |
| 2.1 | Signal output (OUT 2) |
| $\mathbf{1 . 2 , 2 . 2}$ | Ground contact (GND) <br> for 2- and 3-wire termination |
| $\mathbf{1 . 3 , 2 . 3}$ | FE connection <br> for 3-wire termination |
| $\mathbf{1 . 4}$ | Signal output (OUT 3) |
| $\mathbf{2 . 4}$ | Signal output (OUT 4) |
| $\mathbf{1 . 5 , 2 . 5}$ | Ground contact (GND) <br> for 2- and 3-wire termination |
| $\mathbf{1 . 6 , 2 . 6}$ | FE connection <br> for 3-wire termination |

B 2-wire termination

## Programming Data

| ID code | $\mathrm{BD}_{\text {hex }}\left(189_{\mathrm{dec}}\right)$ |
| :--- | :--- |
| Length code | $41_{\text {hex }}$ |
| Process data channel | 4 bits |
| Input address area | 0 bits |
| Output address area | 4 bits |
| Parameter channel <br> (PCP) | 0 bits |
| Register length (bus) | 4 bits |

## Process Data

IN process data is not available.

## Assignment of the Terminal Points to the OUT Process Data

| Bit view | Bit | 3 | 2 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Assignment | Terminal point <br> (signal) | 2.4 | 1.4 | 2.1 | 1.1 |
|  | Terminal point <br> (GND) | 2.5 | 1.5 | 2.2 | 1.2 |
|  | Terminal point <br> (FE) | 2.6 | 1.6 | 2.3 | 1.3 |
| Status <br> indicator | LED | 4 | 3 | 2 | 1 |

## Technical Data

| General Data |  |
| :--- | :--- |
| Housing dimensions (width $x$ height $x$ depth) | $12.2 \mathrm{~mm} \times 120 \mathrm{~mm} \times 71.5 \mathrm{~mm}$ <br> $(0.480 \mathrm{in} . \times 4.724 \mathrm{in} . \times 2.815 \mathrm{in})$. |
| Weight | 44 g (without connector) |
| Operating mode | Process data operation with 4 bits |
| Connection method of the actuators | 2 -wire and 3-wire technology |
| Permissible temperature (operation) | $-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+131^{\circ} \mathrm{F}\right)$ |
| Permissible temperature (storage/transport) | $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ |
| Permissible humidity (operation) | $75 \%$ on average, $85^{\circ} \%$ occasionally |

| Permissible humidity (storage/transport) | $75 \%$ on average, $85 \%$ occasionally |
| :--- | :--- |

For a short period, slight condensation may appear on the housing if, for example, the terminal is brought into a closed room from a vehicle.

| Permissible air pressure (operation) | 80 kPa to 106 kPa (up to 2000 m [6562 ft.] <br> above sea level) |
| :--- | :--- |
| Permissible air pressure (storage/transport) | 70 kPa to 106 kPa (up to 3000 m [9843 ft.] <br> above sea level) |
| Degree of protection | IP 20 according to IEC 60529 |
| Class of protection | Class 3 according to VDE 0106, IEC 60536 |

| Interface |  |
| :--- | :--- |
| local bus interface | Through data routing |

| Power Consumption |  |
| :--- | :--- |
| Communications power | 7.5 V |
| Current consumption from the local bus | 44 mA, maximum |
| Power consumption from the local bus | 0.33 W, maximum |
| Segment supply voltage $\mathrm{U}_{\mathrm{S}}$ | $24 \mathrm{~V} \mathrm{DC} \mathrm{(nominal} \mathrm{value)}$ |
| Nominal current consumption at $U_{S}$ | $2 \mathrm{~A} \mathrm{(4} \mathrm{\times 0.5A)} maximum$, |

| Supply of the Module Electronics and I/O Through Bus Terminal/Power Terminal |  |
| :--- | :--- |
| Connection method | Through potential routing |

| Digital Outputs |  |
| :---: | :---: |
| Number | 4 |
| Nominal output voltage U UUT | 24 V DC |
| Differential voltage for $\mathrm{I}_{\text {nom }}$ | $\leq 1 \mathrm{~V}$ |
| Nominal current $\mathrm{I}_{\text {nom }}$ per channel | 0.5 A |
| Tolerance of the nominal current | +10\% |
| Total current | 2 A |
| Protection <br> All four channels are th channels. | Short-circuit; overload , i.e., an error in one channel can affect the other |
| Nominal load <br> Ohmic <br> Lamp Inductive | $\begin{aligned} & 48 \Omega / 12 \mathrm{~W} \\ & 12 \mathrm{~W} \\ & 12 \mathrm{VA}(1.2 \mathrm{H}, 50 \Omega) \end{aligned}$ |
| Signal delay upon power up of <br> - Ohmic nominal load <br> - Lamp nominal load <br> - Inductive nominal load | $100 \mu \mathrm{~s}$, typical <br> 100 ms , typical (with switching frequencies up to 8 Hz ; above this frequency the lamp load responds like an ohmic load) <br> 100 ms , typical (1.2 H, $50 \Omega$ ) |
| Signal delay upon power down of <br> - Ohmic nominal load <br> - Lamp nominal load <br> - Inductive nominal load | 1 ms , typical <br> 1 ms , typical <br> 50 ms , typical (1.2 H, $50 \Omega$ ) |

## Digital Outputs (Continued)

Switching frequency with

- Ohmic nominal load

300 Hz , maximum
This switching frequency is limited by the selected data rate, the number of bus devices, the bus structure, the software, and the control or computer system used.

- Lamp nominal load

300 Hz , maximum

3
This switching frequency is limited by the selected data rate, the number of bus devices, the bus structure, the software, and the control or computer system used.

| - Inductive nominal load | 0.5 Hz, maximum $(1.2 \mathrm{H}, 50 \Omega)$ |
| :--- | :--- |
| Overload response | Auto restart |
| Response time with ohmic overload $(12 \Omega)$ | 3 s, approximately |
| Restart frequency with ohmic overload | 250 Hz, approximately |
| Restart frequency with lamp overload | 250 Hz, approximately |
| Inductive overload response | Output may be damaged |
| Response time after short circuit | 850 ms, approximately |
| Reverse voltage endurance against short pulses | Protected against reverse voltages |
| Strength against permanently applied reverse <br> voltages | Up to 2 A DC |
| Strength against permanently applied surge <br> voltage | No |
| Validity of output data after connection of 24 V <br> voltage supply (power up) | 5 ms, typical |
| Response upon power down | The output follows the supply voltage without <br> delay. |
| Limitation of the demagnetization voltage <br> induced on circuit interruption | $-15 \mathrm{~V} \leq \mathrm{U}_{\text {demag }} \leq-46 \mathrm{~V}$ <br> $\left(\mathrm{U}_{\text {demag }}=\right.$ demagnetization voltage) |
| Single maximum energy in free running | 400 mJ, maximum |
| Protective circuit type | Integrated 45 V Zener diode in output chip |

| Digital Outputs (Continued) |  |
| :--- | :--- |
| Overcurrent shutdown | At 0.7 A, minimum |
| Output current when switched off | $300 \mu \mathrm{~A}$, maximum |
| Output voltage when switched off | 2 V, maximum |
| Output current with ground connection <br> interrupted | 25 mA, maximum |
| Switching power with ground connection <br> interrupted | 100 mW at $1 \mathrm{k} \Omega$ load resistance, typical |
| Inrush current with lamp load | 1.5 A for 20 ms, maximum |

| Output Characteristic When Switched On (Typical) |  |
| :---: | :---: |
| Output Current (A) | Differential Output Voltage (V) |
| 0 | 0 |
| 0.1 | 0.04 |
| 0.2 | 0.08 |
| 0.3 | 0.12 |
| 0.4 | 0.16 |
| 0.5 | 0.20 |

## Power Dissipation

Formula to Calculate the Power Dissipation of the Electronics

$$
P_{E L}=0.19 \mathrm{~W}+\sum_{n=1}^{4}\left(0.10 \mathrm{~W}+\mathrm{I}_{\mathrm{Ln}}{ }^{2} \times 0.4 \Omega\right)
$$

Where

| $P_{\text {tot }}$ | Total power dissipation of the module |
| :--- | :--- |
| $n$ | Index of the number of set outputs $n=1$ to 4 |

In Load current of the output $n$
Power Dissipation of the Housing $\mathbf{P}_{\mathrm{HOU}}$
0.6 W, maximum (within the permissible operating temperature)

Concurrent Channel Derating

| Ambient <br> temperature (TA) | Maximum load current at |  |  |
| :---: | :---: | :---: | :---: |
|  | $\mathbf{1 0 0 \%}$ simultaneity | $\mathbf{7 5 \%}$ simultaneity | $\mathbf{5 0 \%}$ simultaneity |
| $\leq 35^{\circ} \mathrm{C}\left(95^{\circ} \mathrm{F}\right)$ | 0.5 A | 0.5 A | 0.5 A |
| $\leq 45^{\circ} \mathrm{C}\left(113^{\circ} \mathrm{F}\right)$ | 0.375 A | 0.5 A | 0.5 A |
| $\leq 55^{\circ} \mathrm{C}\left(131^{\circ} \mathrm{F}\right)$ | 0.25 A | 0.33 A | 0.5 A |

With $100 \%$ simultaneity, a load current of 0.5 A for each channel is permissible up to $35^{\circ} \mathrm{C}\left(95^{\circ} \mathrm{F}\right)$ (ambient temperature range), a load current of 0.375 A between $35^{\circ} \mathrm{C}$ and $45^{\circ} \mathrm{C}\left(95^{\circ} \mathrm{F}\right.$ and $113^{\circ} \mathrm{F}$ ), and a load current of 0.25 A up to $55^{\circ} \mathrm{C}\left(131^{\circ} \mathrm{F}\right)$.

If a maximum of two channels are operated in the permissible ambient temperature range ( $50 \%$ simultaneity), a load current of 0.5 A can be tapped.

If all four channels are used you must define the permissible working point according to the above formula.

| Safety Devices |  |
| :--- | :--- |
| Overload/short-circuit in segment circuit | Electronic; with 4-channel driver |
| Surge voltage | Protective circuits of the power terminal <br> Protection up to 33 V DC |
| Polarity reversal of voltage supply | Protective circuits of the power terminal <br> It is necessary to protect the voltage supply. The <br> power supply unit should be able to supply 4 <br> times (400\%) the nominal current of the external <br> fuse. |
| Reverse voltage | Protection up to 2 A DC |

## Electrical Isolation

$\triangle$
To provide electrical isolation between the logic level and the I/O area, it is necessary to supply the station bus terminal and the digital output terminal described here using the bus terminal or a power terminal from separate power supply units. Interconnection of the 24 V power supplies is not allowed.

## Common Potentials

24 V main power, 24 V segment voltage, and GND have the same potential. FE is a separate potential area.

| $\|$Separate Potentials in the System Consisting of Bus Terminal/Power Terminal and I/O <br> Terminal |
| :--- |
| - Test Distance |
| 5 V supply incoming remote bus/7.5 V supply (bus logic) |
| 5 V supply outgoing remote bus/7.5 V supply (bus logic) |
| 7.5 V supply (bus logic)/24 V supply (I/O) |
| 24 V supply (I/O)/functional earth ground |

## Ordering Data

| Description | Order Designation | Order No. |
| :--- | :--- | :--- |
| Terminal with four digital outputs | VARIO DO 4/24 | KSVC-102-00231 |
