## I/O Extension Module With Eight Digital Outputs

## User Manual

02/2003

This data sheet is only valid in association with the documents of the used fieldbus coupler

## Function

The terminal is designed for use within an VARIO station. It is used to output digital signals.

## Features

- Connections for eight digital actuators
- Connection of actuators in 2-, 3-, and 4-wire technology
- Nominal current per channel: 0.5 A
- Total current of the terminal: 4 A
- Short circuit and overload protected outputs
- Diagnostic and status indicators

| Reverse voltage | Protection up to 2 A DC |

## Electrical Isolation/Isolation of the Voltage Areas

1
To provide electrical isolation between the logic level and the I/O area, it is necessary to supply the station bus terminal and the digital output terminal described here using the bus terminal or a power terminal from separate power supply units. Interconnection of the 24 V power supplies is not allowed.

## Common Potentials

24 V main power, 24 V segment voltage, and GND have the same potential. FE is a separate potential area.
Separate Potentials in the System Consisting of Bus Terminal/Power Terminal and I/O Terminal

| - Test Distance | - Test Voltage |
| :--- | :--- |
| 5 V supply incoming remote bus/7.5 V supply (bus logic) | $500 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}, 1 \mathrm{~min}$. |
| 5 V supply outgoing remote bus/7.5 V supply (bus logic) | $500 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}, 1 \mathrm{~min}$. |
| 7.5 V supply (bus logic)/24 V supply (I/O) | $500 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}, 1 \mathrm{~min}$. |
| 24 V supply (I/O)/functional earth ground | $500 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}, 1 \mathrm{~min}$. |

## Error Messages to the Higher-Level Control or Computer System

Short circuit/overload of an output
Yes

An error message is generated when an output is shorted and switched on. In addition, the diagnostic LED (D) flashes on the terminal at 2 Hz (medium) under these conditions.
